APPENDIX F-74

ASSET MANAGEMENT EXTENDED EDIT LISTING
TOTAL INQUIRY - EXTENDED EDIT DATA - BY NSN/PGC/FSC/ORC

1. PURPOSE

To provide Inventory Managers (IMs) with a hard copy of all records loaded in the Asset Management Extended Edit File by the major sort sequences. The extended edit data is IM defined and loaded into the file via the online SAMMSTEL Verb SDCF. All the extended edit data loaded in the Asset Management Extended Edit File will be printed out together as four separate listings of the report. The four listings are printed by National Stock Number (NSN), Procurement Group Code (PGC), Federal Supply Class (FSC) and Integrated Materiel Manager (IMM) Output Routing Code (ORC).

2. ORIGIN

The Inquiry may be manually requested from the local Systems organization.

3. FREQUENCY

As required.

4. FORMAT

- a. Heading Line (Standard Identification).
- b. Data Organization:
 - (1) Sequence:
 - (a) Part 1 Sort by Key NSN.
 - 1. Major: NSN.
 - 2. Minor: Step within NSN.
 - (b) Part 2 Sort by Key PGC:
 - $\underline{1}$. Major: PGC.
 - 2. Minor: Step within PGC.
 - (c) Part 3 Sort by Key FSC:
 - 1. Major: FSC.
 - 2. Minor: Step within FSC.

- (d) Part 4 Sort by Key ORC:
 - 1. Major: IMM-ORC.
 - 2. Intermediate: NSN within IMM-ORC.
 - 3. Minor: Step within NSN.
- (2) Number of lines per page: Variable.
- (3) Spacing: Double-Spaced.
- (4) Page Break: Change of Part or by overflow of records Captions of Data Elements:
 - c. Captions Of Data Elements:
- (1) NSN/PGC/FSC The key of the record as it was established in the Asset Management Extended Edit File.
 - (2) STAT Status of record. A = Active, D = Delete.
 - (3) EFFT-DATE Effective Date for manager directed action.
- (4) IMM-ORC Integrated Materiel Manager Output Routing Code of the item.
 - (5) DOLA Date of last action to the record (mechanically updated).
- (6) SRC Source Code entered in the initial SAMMSTEL Extended Edit Configuration Menu when the record was established.
- (7) MRQ-OPT Maximum Release Quantity Option. Y or N With the default N.
- (8) STEP Sequential processing step (01-99) to be taken as part of the direction action criteria for the associated NSN, FSC(s), PGC(s), or all NSNs identified in the key field.
- (9) PROJECT OPR/CODE Project Code Operator/Code. The Operator is a one position code which represents either an E(xclusive) or I(nclusive) directed action condition for the associated Project Code.
- (10) PRIORITY OPR/CODE Priority Operator/Code. The Operator is a one position field representing the relational condition < (less than), = (equal to), or > (greater than). Use with the associated Priority Code to set up condition criteria for processing requisition Issue Priority Designator.
- (11) DoDAAC OPR/CODE Department of Defense Activity Address Code Operator/Code. The Operator is a one position code representing either an E(xclusive) or I(nclusive) directed action for the associated DoDAAC.
- (12) SERVICE OPR/CODE Service Operator/Code. The Operator is a one position code representing either and E(xclusive) or I(nclusive) directed action for the associated Service/Activity Codes (less FEDSTRIP). The Service/Agency Code field is comprised of up to five one

position alpha codes which represent individual Service Assignment Codes, except FEDSTRIP. These codes may be in any random order, and represent the specific service(s) whose requisitions will be considered for processing if this criteria option is used.

- (13) COMPARISON TYPE Type of Comparison Code. One position code that specifies the type of quantity comparison to use in conjunction with the Quantity Operator and Type of Level Code (quantity or level) to be used in determining processing criteria for requisitions. Allowable codes (C, R, and S) are defined as follows:
- (a) C Compare the $\underline{\text{result}}$ of the [NIR Issuable Assets quantity] minus [the requisitioned quantity] to the quantity identified by the Type of Level Code and the relational operator (<, = or >). If the comparison condition is met, requisitions will be processed under this criteria.
- (b) R Compare the <u>requisitioned quantity</u> to the quantity level identified by the Type of <u>Level Code</u> and the relational operator (<, = or >). If the comparison condition is met, requisitions will be processed under this criteria.
- (c) S Compare the NIR Issuable Assets quantity to the quantity identified by the Type of Level Code and the relational operator (<, = or >). If the comparison condition is met, requisitions will be processed under this criteria.
- (14) COMPARISON OPR Quantity Operator. One position field representing either the relational condition < (less than), = (equal to) or > (greater than). Use in conjunction with the quantity identified by the Type of Level Code, as specified by the Type of Comparison Code in order to establish a comparison condition.
- (15) LEVEL TYPE/LEVEL Type of Level Code and Quantity Level. The Level Code represents a one position alpha code identifying either a numeric quantity or a SAMMS supply level as defined below. If the identified quantity level is numeric, then a quantity value was entered in the associated Level field. If the quantity identified is a SAMMS supply level, then that quantity was extracted from the NIR.
- (a) Q Five position numeric (00000 99999) quantity entered in LEVEL field. A letter Q entry will identify this quantity, and a numeric value must be present in the level field.
- (b) M NIR Maximum Release Quantity (MRQ). A letter M entry will identify this MRQ quantity level.
- (c) U NIR UMMIPS Control Level (UMMIPS). A letter U entry will identify this UMMIPS quantity level.
- (d) H One-half UMMIPS. A letter H entry will identify this one-half UMMIPS quantity level.
- (e) L Reorder Point Level. A letter L entry will identify this Reorder Point quantity level.

(16) ACTION - Action Code. This two position field represents the mechanical directed action to execute in a specific step. The specified action for a given processing step will only be executed if the item meets all the qualifications established in the rules above. The allowable Action Codes are listed:

BA	BH	CJ	CQ	HA	HD
BB	BV	CK	CW	HB	НJ
BM	C8	CP	CU	HC	NP

- (17) LOCATION Storage Location Code (RIC). Three position Storage Location Code to be used with the associated directed action. An entry must be present in this field for Action Codes BM. It is optional for BA, if an entry is not present, the programmed default will use the Source Preference Table.
- (18) O/P Ownership/Purpose Code. One position Ownership/Purpose Code to be used with the associated Action Code. If an entry is not present, the programmed default will be O/P Code A.
- (19) COND Condition Code. One position condition Code to be used with the associated Action Code. If an entry is not present, the programmed default will be Condition Code A.
- (20) MOQ Minimum Order Quantity. Five position numeric quantity representing the minimum quantity per order (DVD requisition) that a vendor will accept. An entry in this field must be present with Action Code C8.
- (21) NSN Substitute National Stock Number. An entry must be present in this field for Action Code BH.
- (22) UI Unit of Issue. An entry must be present in this field if a substitute NSN has been entered. This field represents the Unit of Issue For the substitute NSN.
- (23) DECIMAL Decimal Locator. This field represents the one digit decimal locator that when used along with the multiplication factor comprises the Unit of Issue Conversion Factor. This entry must be present if substitute NSN UI is different than original NSN UI.
- (24) FACTOR Multiplication Factor. This entry must be present if substitute NSN UI is different than original UI. This field represents the five position numeric factor that when used along with the one digit decimal locator comprises the Unit of Issue Conversion Factor. The Substitute Unit of Issue Conversion Factor will be used in adjusting the requisitioned quantity when processing a substitute NSN with a Unit of Issue different than the original NSN Unit of Issue.

5. DISTRIBUTION AND RETENTION

Reports are generated as the result of a request to the Systems organization and will be output to the ORC of the requester. It should be retained until their purpose has been served.

6. PROCEDURES FOR REVIEW AND PROCESSING

Reports will be used for the purpose for which it was requested.
